

Essay 1: Atoms and Stars: Due in Class October 10 (Oakland), 4 (Campus)
We have studied the process by which Aristotle's view that nature abhors a vacuum was replaced by the sea of air hypothesis. Following Copi's seven step account of scientific method, explain how this transition took place. Draw on material from the reading, class discussion, and the laboratory experiments. Reflect upon what this tells us about the process of science. Your essay should be 2-3 pp., double-spaced if typed (about 500-750 words if handwritten).
